STATE AND LOCAL STATISTICS AND PLANNING INFORMATION

T e n

The following tables were created from solid waste collection and recycling data provided by the counties, disposal data reported by the permitted solid waste management facilities, and solid waste data available in previous solid waste management annual reports. These tables were created to provide a comprehensive look at specific activities and trends related to solid waste management in South Carolina. The total and defined MSW recycling rates and the total and defined SW reduction/disposal rates were calculated. Other variables were created for planning and comparisons purposes. For calculations not provided here, please contact the Department.
